WHAT THE PAGE SAYS

Instant Multi-TLD Domain Availability.

A free domain tool, powered by Cloudflare. Real-time availability and pricing via the Cloudflare Registrar API.

FIVE MOVES

The path, in order

Check a keyword. Describe the business in the chat. Read available against taken. If the .com is taken, try another TLD on that same page. Then the domain hack tool, which you still have to verify.

1 Check a keyword Type it, then press Check Availability.

2 Describe the business Use the chat. Read the keywords it suggests.

3 Read available vs taken Green count, red count, then the rows.

4 If the .com is taken Try another TLD already on that same page.

5 Then Domain Hack Ideas only. You still have to verify them.

 **Tip**
Purchase was on the available rows in this walk. It was not clicked. Nothing was bought.

2 Order: keyword check, describe the business in the chat, read available versus taken, try another TLD on that same page, then Domain Hack ideas you still verify.

The start screen

The box is still the sample placeholder. Check Availability is on the right. The chat link sits under the card.

**Tip**

"Enter name (e.g. mybrand or mybrand.com)" is the sample placeholder. Replace it with your own keyword or full domain.

3

"Type a keyword or full domain. We check real-time availability & pricing via the Cloudflare Registrar API and show you what you can buy."

A keyword check

The box says maple street bakery. The page says Available 30 and Taken 0. The names continue below this crop.

Tip

Available 30 is what the page says. This crop does not show all 30 rows, so those names are not listed here.

Ideas from the chat

Two rows are still on screen above the chat. The reply suggests maplestreetbake, then a short list of keywords.

Tip

These keywords came from the chat after Send. Purchase on the two rows above was not clicked.

Maple Street Bakery (Demo), a neighborhood bakery on Maple Street. Fresh bread, cakes, and morning coffee.

Sounds like a cozy spot! A neighborhood bakery on Maple Street is a classic concept. I'd suggest "maplestreetbake" as a strong keyword. Here's a machine-readable JSON block:

```
{"keywords":["maplestreetbake","maplestreet","freshbread","neighborhoodbake"], "suggestions":["bakehouse", "maplecraft", "streetbread", "bakeco", "maplelove", "bakeclub", "freshloaf", "maplecrumb"]}
```

Domain Hack generator

A pro tip for ideas only. The field is empty. This tool does not check whether a hack is free.

Warning

Domain Hack suggests names only. It does not check availability. Check any hack in advanced domain search before you rely on it.

The screenshot shows the 'Domain Hack Generator' tool on the 'registermysite.com' website. The page has a dark theme. At the top, there's a navigation bar with the site logo, 'All Tools', 'WHOIS Lookup', and 'TLD List'. The main heading is 'CREATIVE DOMAIN TOOL' followed by 'Domain Hack Generator' in a large, bold font. Below the heading, a subtitle reads: 'Type a word or short phrase and discover clever domain hacks using real TLDs. Perfect for memorable, brandable names.' In the center, there's a large, rounded rectangular input field. Above the field, it says 'ENTER A WORD OR SHORT PHRASE'. Inside the field, there are two numbered steps: Step 1 shows 'e.g. delicious, read, play, invent' and Step 2 says 'Start typing to see domain hack suggestions...'.

https://registermysite.com/tools/Domain_Hack — field still shows “e.g. delicious, read, play, invent”. Nothing was typed. “Start typing to see domain hack suggestions...”
