Wrangler

Deploy a static HTML page from HTML Studio.

Walkthrough on 3 October 2026, after HTML Studio gained a Send to Wrangler button.

Send

Import

Check

Deploy

RMS WRANGLER v0.3 · mode LIVE · default zone
DIYREGISTRY.COM

WELCOME, FROM THE WALKTHROUGH

```
🔥 RMS WRANGLER v0.3 - password accounts, isolated homes
Zones: diyregistry.com  signup.com  monstertruck.monster  misfit.monster
rms signup you@email    rms login you@email
Passwords are prompted and never written to history.
Type help    or    coach how do I publish a page?
```

The session bar above this crop is not shown. It is not needed for the welcome text.

SEVEN STEPS

The path, in order

Send the page, import it, check it, see the zones, deploy, then open the URL.

1	Send to Wrangler	Slug bistro-lumi-re in the dialog.
2	import --studio	Imports Bistro Lumière. Not rms import.
3	ls	public/ and wrangler.jsonc.
4	wc public/index.html	Second line: 3100 words.
5	rms zones	Four zones. Default diyregistry.com.
6	rms deploy	Project bistro-lumi-re, zone diyregistry.com.
7	Open the URL	https://diyregistry.com/s/bistro-lumi-re/

💡

Tip

Passwords are prompted and never written to history.

Wrangler is RMS WRANGLER v0.3, mode LIVE. The welcome also says "password accounts, isolated homes."

2

Welcome text you can quote: "password accounts, isolated homes" and "Passwords are prompted and never written to history."

SLIDE 3 OF 12

Send to Wrangler

The slug in this dialog is what gets sent. The project name was still Bistro Lumière.

!

Warning

The header still said Ready and No project id. This dialog's slug is what gets sent.

Export & deploy

HTML is published to a path slug on the zone you pick — no new Worker is created. Example: sites.registermysite.com/your-slug

PROJECT NAME

Bistro Lumière

PUBLISH ZONE

sites.registermysite.com

SLUG

bistro-lumi-re

https://sites.registermysite.com/bistro-lumi-re/

Slug is available.

Download HTML

Cancel

Send to Wrangler

Publish slug

3 Walkthrough reply, not visible on this modal: "Sent bistro-lumi-re. Run import --studio at wrangler.registermysite.com".

SLIDE 4 OF 12

import --studio

It imported Bistro Lumière, then printed the deploy command to run next.

Warning

The command is `import --studio`, not `rms import`. If you have not sent yet, there is no pending export.

1

```
~/sites $ import --studio
```

```
Imported "Bistro Lumière"
```

```
files: public/index.html
```

2

```
next: rms deploy --project-name=bistro-lumi-re --zone=diyregistry.com
```

4

`rms import` returns "Unknown rms subcommand: import". Before Send to Wrangler: "No pending HTML Studio export. POST /api/import first."

SLIDE 5 OF 12

ls

Two names in ~/sites/bistro-lumi-re: public/ and wrangler.jsonc.

```
~/sites/bistro-lumi-re $ ls  
public/  wrangler.jsonc
```

1

2

5 Working folder after import: ~/sites/bistro-lumi-re. ls printed public/ and wrangler.jsonc.

SLIDE 6 OF 12

wc public/index.html

The line printed 777, 3100, and 38980. A second line said 3100 words.

**Tip**

On this product, wc prints lines, words, and bytes, in that order.

```
~/sites/bistro-lumi-re $ ls
public/  wrangler.jsonc
~/sites/bistro-lumi-re $ wc public/index.html
    777    3100   38980 public/index.html
 3100 words
```

SLIDE 7 OF 12

rms zones

Four operator zones. Attach is a path:
`https://<zone>/s/<slug>/`.

```
~/sites/bistro-lumi-re $ rms zones
Operator zones (default diyregistry.com)
  1  diyregistry.com      https://diyregistry.com/s/hello/
    signup.com          https://signup.com/s/hello/
    monstertruck.monster https://monstertruck.monster/s/hello/
    misfit.monster       https://misfit.monster/s/hello/
  2  Attach is path: https://<zone>/s/<slug>/
~/sites/bistro-lumi-re $
```

7 Default zone diyregistry.com. Each hello URL is `https://<zone>/s/hello/`. Attach is path: `https://<zone>/s/<slug>/`.

SLIDE 8 OF 12

Deploy

Deployment complete. The URL is a path on diyregistry.com. Version 1.

**Tip**

Two assets, mode LIVE. The URL is a path, not a subdomain.

```
~/sites/bistro-lumi-re $ rms deploy --project-name=bistro-lumi-re --zone=diyregistry.com
Uploading...
Deploying 2 assets to diyregistry.com...
✦ Deployment complete
  Project : bistro-lumi-re
    Zone  : diyregistry.com
  ① URL   : https://diyregistry.com/s/bistro-lumi-re/
    Mode  : LIVE
  ② Version : 1
    Attached at https://diyregistry.com/s/bistro-lumi-re/
```

SLIDE 9 OF 12

The live page

Maple Street Bakery (Demo). The headline is Freshly Baked on Maple Street.

WARNINGS

What not to mix up

Three warnings from this walkthrough. Two of them we hit before the button existed.

**Warning**

rmc import is not a command. It returns "Unknown rmc subcommand: import". The command is import --studio.

**Warning**

import --studio before Send to Wrangler returns "No pending HTML Studio export. POST /api/import first."

**Warning**

The live URL is a path on the zone, not sites.registermysite.com. That zone belongs to HTML Studio's own publish.

RECAP

The commands, in order

One line each, in the order the walkthrough ran them.

- 1 Send to Wrangler · `slug bistro-lumi-re`
- 2 `import --studio`
- 3 `ls`
- 4 `wc public/index.html`
- 5 `rms zones`
- 6 `rms deploy --project-name=bistro-lumi-re --zone=diyregistry.com`
- 7 Open <https://diyregistry.com/s/bistro-lumi-re/>
